Stambena zgrada u Ulici Kralja Milana broj 88 u Kragujevcu nalazi se na granici zone stambenih objekata u nizu i zone javnih namena u okviru koje se nalazi parcela Gerontološkog centra čime je uslovljeno formiranje objekta u prekinutom nizu. Urbaničkim analizom pravila građenja definisane su dve varijante rešenja: Varijanta 1: Koristeći se parametrima za prekinuti niz objekata pordičnog stanovanja, dobija se povoljnije rešenje stambenog objekta kompaktnej oblike sa glavnim orijentacijama prema ulici i u sopstvenom dvorištu, sa formiranim ulazom na glavnoj fasadi objekta. Varijanta 2: Koristeći se parametrima za prekinuti niz višeporodičnog stanovanja, udaljen od Gerontološkog centra bi moralo biti mnogo veće, čime se dobija objekat veoma uskog fronta sa glavnim orijentacijama prema objektu Gerontološkog centra i njegovom dvorištu. Varijanta 1 je prihvaćena kao povoljnije rešenje i za stanare buduće zgrade i za korisnike gerontološkog centra. Zahvaljujući kompaktnom obliku, projektovani su racionalni stanovi sa sekundarnim otvorima na bočnoj fasadi i prema svetlarnicima, čime se dobija dobra osvetljenost i proventrenost. Dimenzije i proporcije stanova omogućili su skalabilnost stambene

strukturu i mogućnost lakog formiranja dodatne sebe u okviru iste zadate kvadrature. Širina fronta iskoriscena je da se na glavnoj fasadi isprojektuje ulaz u objekat, odvojen od kolskog prolaza i materializaciji od klinker opakarskih elemenata na ravnom slogu koji se uvlači u unutrašnji prostor. Krovana terasa je zamisljena kao bezebedan prostor udaljen od ulice, koji bi imao potencijal letnje baštice za organizovanje dečjih rođendana, proslava i drugih društvenih potreba stanara, kao ekstenzija prostora kompaktnog stana i kompenzacija za nedostatak kvalitetnije organizovanog dvorišta zbez ušlovljenog broja parking mesta. Prema poslednjem izmenama planški dokumentu u Kragujevcu, na parcelama manjim od 6 ar više neće biti moguće projektovati stambene zgrade ove razmere do daljnog, vec se podstiče gradnja porodičnih kuća ili stambenih zgrada sa više od 18 do 20 stanova i mnogo veće spratnosti. U tom smislu, ovo je jedan od poslednjih primera izgradnje stambenih zgrada manje razmere i ostvarivanja komfora koji pruža stambena zajednica sa manje od deset stambenih jedinica.

The residential building in Kralja Milana Street number 88 in Kragujevac is located on the border of the zone of a row housing and the zone of public use, within which is the plot of the Gerontological Center, which conditioned the formation of the building in an interrupted row. Urban analysis of building rules defined two variants of solutions: Variant 1: Using the parameters for an interrupted row of single-family housing, a more favorable solution is obtained of a more compact residential building with main orientations towards the street and its own yard. Variant 2: Using the parameters for an interrupted row of multi-family housing, the distance from the Gerontological Center would have to be much greater, which results in a building with a very narrow front with the main orientations towards the Gerontological Center building and its yard. Variant 1 was accepted as a more favorable solution both for the tenants of the future building and for the users of the gerontological center. Thanks to the compact shape, rational apartments were designed with secondary openings on the side facade and towards the skylights, which provides good lighting and ventilation. The dimensions and proportions of the apartments enabled the scalability of the residential structure and the possibility of easily creating an additional room within the same given square footage. The width of the front was used to design the entrance to the building on the main facade, separated from the carriageway, materialized from clinker brick elements on a flat slab that extends into the interior space. The roof terrace was conceived as a safe space away from the street, which would have the potential of a summer garden for organizing children's birthdays, celebrations and other social needs of the tenants, as an extension of the space of a compact apartment and compensation for the lack of a better organized yard due to the limited number of parking spaces. According to the latest changes to the planning documents in Kragujevac, it will no longer be possible to design residential buildings of this scale on plots of land smaller than 6 acres until further notice, but the construction of buildings with more than 20 apartments is encouraged. In this sense, this is one of the last examples of the construction of residential buildings on a smaller scale and the realization of the comfort provided by a residential community with less than ten residential units.
