PROJECT DESCRIPTION IN MOTHER TONGUE
*Descrierea proiectului în limba maternă **A projekt leírása a pályázó anyanyelvén ***Opis projekta na maternem jeziku

"Transparent house" se nalazi na Gardošu u Zemunu. Površina objekta je 179.8 m² (sa krovnom terasom), dok se parcela prostire na 226.9 m². Spolja je gledana, spratnost je P+1 ali unutrašnjost kuće je razigrana polu-nivoima. Objekt je tipa kuće u nizu tako da se vizuelno i funkcionalno otvara prema kući Gardoš sa jedne i Dunavu sa druge strane. Sve pregrade u objektu, osim nosećih, su staklene i na taj način korisnik ima mogućnost da otvori ceo objekt i da ostvari potpunu transparentnost bez da mu unutrašnja struktura zaklapa vizure. Korisnik manipuliše zavesama koje se nalaze na svim staklenim pregradama sam određuje količinu svetlosti i privatnosti koju želi. Obzirom na dužinu objekta, kako bi dotoč prirodnog svetla bio što veći, postoje dva velika svetlarnika sa obe bočne strane kuće. Ulica na koju izlazi prednja fasada je pod nagibom, a kontekst čine uglavnom porodične kuće spratnosti P+1 čije su fasade postavljene na front ulice. Na ulični front je takođe postavljena zavesa

koja ima za cilj da isprati kontekst tako što neće narušavati kontinuitet fasada, ali i da pruži dodatnu privatnost korisnicima. Sama kuća je povučena u odnosu na regulacionu liniju i na taj način je dobio dodatno zelenilo u prednjem delu dvorišta kao i spoljašnje parking mesto. Prizemlje se sastoji od kuhinje sa trpezarijom, gostinjskog toaleta i garaže. U podrumu koji je spušten za polu-nivo su smeštene kotlarnica i kancelarija do kojih se dolazi glavnim stepeništem. Stepenište takođe vodi ka dnevnom boravku koji je podignut za polu-nivo u odnosu na prizemlje i iz kojeg se pružaju vizure kroz celu dužinu objekta na tri strane. Sprat je osmišljen kao noćna zona i sastoji se od glavne spavaće sobe sa odvojenim kupačilom i garderobom, dečije sobe, drugog kupačila i sobe za igru. Obzirom da kuća ima ravan krov, na njemu je formirana krovna terasa kojoj se pristupa spiralnim stepeništem sa trema u zadnjem dvorištu.

PROJECT DESCRIPTION IN ENGLISH
*Descrierea proiectului în engleză **A projekt leírása angol nyelven ***Opis projekta na engleskom

"Transparent house" is located on Gardoš in Zemun. The area of the building is 179.8 m² (with a roof terrace), while the plot is 226.9 m². From the outside, the floor plan is P+1, but the interior of the house is playful with half-levels. The building is of the type of terraced house so that it visually and functionally opens towards the Gardoš tower on one side and the Danube on the other. All partitions in the building, except for the load-bearing ones, are made of glass, and in this way the user has the possibility to open the entire building and achieve complete transparency without the internal structure obscuring his views. By manipulating the curtains on all the glass partitions, the user determines the amount of light and privacy he wants. Considering the length of the building, in order to maximize the flow of natural light, there are two large skylights on both sides of the house. The street on which the front facade opens is under a slope, and the context consists mainly of single-story P+1 family houses whose facades are placed on the street front. A curtain was also placed on the street front, which aims

to follow the context by not disrupting the continuity of the facades, but also to provide additional privacy to the users. The house itself is set back from the regulation line and in this way additional greenery was obtained in the front part of the yard as well as an external parking space. The ground floor consists of a kitchen with a dining room, a guest toilet and a garage. A boiler room and an office are located in the basement, which is lowered to a half-level, which can be reached by the main staircase. The staircase also leads to the living room, which is raised half a level in relation to the ground floor and from which views are provided through the entire depth of the building on three sides. The first floor is designed as a night zone and consists of a master bedroom with a separate bathroom and wardrobe, a children's room, a second bathroom and a playroom. Since the house has a flat roof, a roof terrace has been formed on it, which is accessed by a spiral staircase from the porch in the back yard.
