Projekat pod nazivom Re-district je veoma složen koncept koji podrazumeva očuvanje postojećeg stanja na lokaciji, na segmentu jednog urbanističkog poteza unutar centra grada Beograda, i njegovu rekonstrukciju i prenamenu. U pitanju je metod interpolacija i regeneracije objekata koji su trenutno namenjeni stanovanju, a odliku su gradskie arhitekture 19. i 20. veka u Beogradu. Izrada ovakvog projekta podrazumevala je veoma analitičan proces, odnosno istraživanje stanja postojećih objekata i njihovog potencijala, kao i ispitivanje kako se jedna ovakva struktura prilagođava potrebama savremenog čoveka i sa odgovarajućim intervencijama nastavlja da živi neki nov život. Takođe, ovakvo projektno rešenje nam prikazuje kako možemo zadržati morfologiju bloka i ne narušavati okruženje novim grandioznim arhitektonskim potezima, a ipak dobiti neki potpuno nov sadržaj i posledično sačuvati prostore i objekte od velike društveno-kulturne važnosti lokalne zajednice, specifičnog arhitektonskog narativa. Kao što je već u tekstu rečeno, primenjena su dva osnovna metoda intervencije nad predmetnim blokom. Prvi jeste vid rekonstrukcije i prenamene sačuvanih objekata. On

The Re-district project is a complex idea concerning reconstruction and adaptive reuse of already existing buildings on the location site, the segment of the urban area within the Belgrade city center. It is an urban interpolation and regeneration of the housing buildings, currently inhabited, which originated and are a symbol of Serbian architecture in 19th and 20th century, that developed throughout the cities. Designing such urban block implies an analytical process, the exploration of the current state of existing buildings and their potential, and also questioning how can a similar structure deploy and adapt to our contemporary needs. Also, this project depicts, how can a certain space of great importance to the local community, socially wise, with specific architecture narrative be saved. Furthermore, it shows us that we do not necessarily need a huge impactful architecture project to create a new content within the found urban scheme, we can always reuse and revitalise the ones we already have. As it was

mentioned in the text before, the two main methods used to intervene on the location site are urban regeneration and interpolation. The first one includes the preservation of the old structures and their reconstruction. The old ornamental, facade walls were saved and the whole new construction (the set of steel columns and ribs, that strengthens the preserved structures) and new elements (polycarbonate, half-transparent walls) were added. The second method was interpolation, or integration of completely newly designed and built buildings within the urban scheme. The ground floors of new and old building intertwine, creating the pavilion like surrounding. The used methods create a very dynamic and new space within the buildings and the whole block itself, filled with micro-ambientes, which combine old and new. The majority of the buildings on the location site are galleries, smaller shops, ateliers or spaces where local artists and designers can produce and exhibit their work.
